

Version History:
v2.3:
Fix footprint issues
Update RC values to match timing of the LTC6811
Redo PCB layout to reduce islands and vias
v2.2:
PCB layout to make everything symmetrical
and easier to solder
v2.1:
Board supports 16 temperature sensors, add
RC filter to all temperature sensors

Scrutineering Inputs

LTC6811 delay between sleep and
measuring ADC voltage is T_WAKE+T_REFUP
 $T_WAKE+T_REFUP = 200\mu s + 2.7ms = 2.9ms$ (minimum)
 $freq = 1 / 0.0029 = 345Hz$
Setting LC cutoff freq to $2 * 345 = 690$
Using a 47nF cap and 4.7k resistor,
we achieve a cutoff freq of 720Hz.
